

Project Management: Billing

Version SAP Busi10.0ness One

PUBLIC

THE BEST RUN 

Welcome to the **Project Management – Billing** course.
In order to understand this course, you need to be familiar with the *Project Management* module as described in the **Project Management** course.

Objectives

At the end of this topic, you will be able to:

- Add time sheet records
- Define documents, activities and time sheet records as chargeable
- Run the Billing Document Generation Wizard

At the end of this topic, you will be able to:

- Add time sheet records
- Define documents, activities and time sheet records as chargeable
- Run the Billing Document Generation Wizard

Business Scenario

OEC Computers provides technical IT solutions for their customers.

They use the *Project Management* module to manage complicated projects.

In these projects they bill their customers for working hours, purchased components, assembly of devices and so on. Today, they issue invoices manually.

In addition, the company sends technicians to do various tasks on customers sites, and they would like to document these hours to bill them accordingly.

To achieve this, OEC computers decides to use the Billing Document Generation Wizard to create invoices for multiple billable components related to a project.

OEC Computers provides technical IT solutions for their customers.

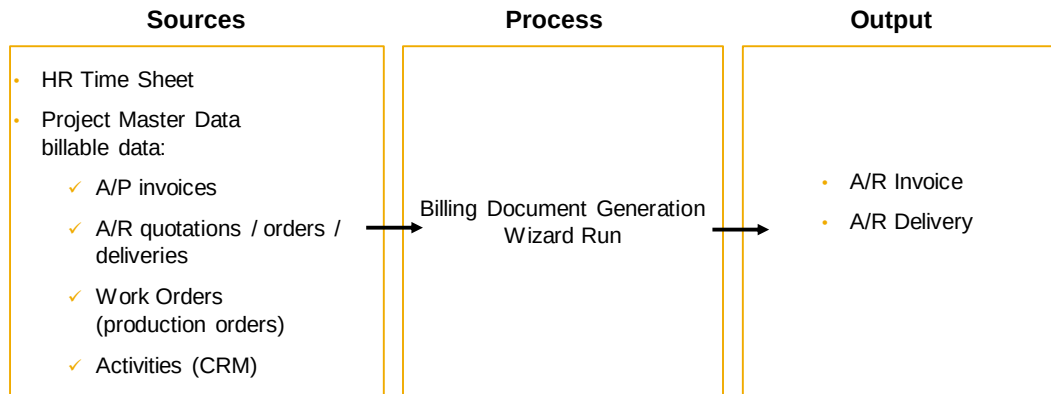

They use the *Project Management* module to manage complicated projects.

In these projects they bill their customers for working hours, purchased components, assembly of devices and so on. Today, they issue invoices manually.

In addition, the company sends technicians to do various tasks on customers sites, and they would like to document these hours to bill them accordingly.

To achieve this, OEC computers decides to use the Billing Document Generation Wizard to create invoices for multiple billable components related to a project.

Billing Document Generation Wizard - Concept

4

The *Billing Document Generation wizard* is available starting from version 9.3.

This wizard collects open documents and billable project information. The wizard processes this data and generates an A/R invoice or a delivery.

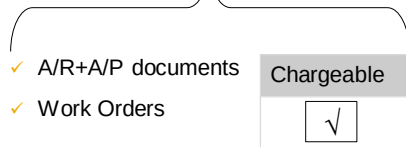

The sources for the wizard can be:

- A/P invoices that were issued as expenses of the project,
- A/R quotations, orders or deliveries that were already issued to the project's customer and can be copied to a delivery or an invoices.
- Closed work orders for items produced for the project.
- Activities for meetings, calls and tasks that were made in this project.

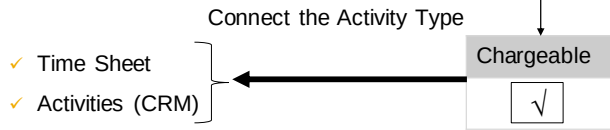

Marking Source Data as Chargeable

Different ways to mark different data as chargeable

In the *Project Master Data*

In the *Activity Type* window

© 2020 SAP SE or an SAP affiliate company. All rights reserved. | INTERNAL

5

The *Billing Document Generation wizard* only collects records that are marked as *Chargeable*.

In the *Project Master Data*, in the lower data matrix, you can check the *Chargeable* box for marketing document and work order rows.

Activities and time sheet records are marked as chargeable in a different way.

First you define *Activity Types*. For each *Activity Type* record, you define whether it is chargeable or not. Then, you connect a chargeable *Activity Type* to a *Time Sheet* record or to an *Activity* (CRM).

You will learn how to set this up in the next slides.

Marking Document Rows as Chargeable in the Project Master Data

In the *Project Master Data*:

- ▶ Open Issues
- ▶ Attachments
- ▼ Documents

#	Doc. Type	Doc. No.	Doc. Date	Total	Chargeable
1	A/P Invoice	743	23.10.18	100.00	☒
2	A/P Invoice	742	23.10.18	100.00	☒

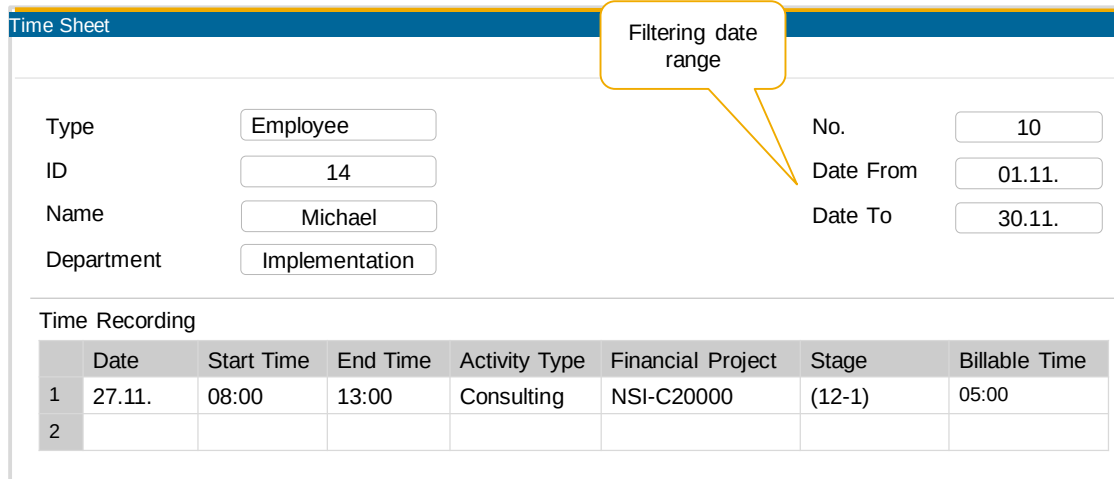

Work Orders as marked as chargeable the same way.

In order to include marketing documents and work orders from the project in the billing process, you need to mark them as *Chargeable*.

In the image you can see two A/P invoices that are marked as chargeable.

Note that work orders are marked the same way in the *Project Master Data*.

The Time Sheet

Time Sheet

Type: No.:
 ID: Date From:
 Name: Date To:
 Department:

Time Recording

	Date	Start Time	End Time	Activity Type	Financial Project	Stage	Billable Time
1	27.11.	08:00	13:00	Consulting	NSI-C20000	(12-1)	05:00
2

7

The *Time Sheet* is a *HR* object in SAP Business One. It is used to record durations of different activities made by an employee, a user or another entity. It can also be used to record employees' attendance manually.

There is one time sheet record for each employee/ user. The records are filtered according to the time range entered in the header. For each employee or user, create a time sheet. You can continue to add rows for each time an employee works on a project. In each row, you specify the date and the activity for the work performed.

A time sheet report can be generated directly from the *Project Master Data*. Right-click the project's header to receive a report filtered by the project/ sub project. Right-click a stage to receive a report filtered for this stage.

In OEC Computers, employees record the time they spend on the customer site or when doing other back office tasks related to a certain project. For each record, a certain *Activity Type* is chosen. An *Activity Type* is either chargeable or not. A time sheet record that is connected to a chargeable activity and connected to a project stage, will be included in the billing wizard. Activity types are predefined separately – let us see how in the next slide.

Activity Type

Administration Setup > Project Management > Activity Types

#	Activity Type	Labor Item	Charg...	Absence
1	Consulting	L10001	☒	☐
2	Sick leave		☐	☒
3	Back Office	LB00002	☒	☐
4			☒	☒

Using the *Activity Type*, *Time Sheet* records and *Activities* (CRM) can be marked as chargeable

Time Sheet				
	Date	Start Time	End Time	Activity Type
1	27.11.	08:00	13:00	Consulting
2

8

- First of all note that the *Activity Type* and the *Activity* (meeting, call etc.) are two different objects. While the first one is a definition related to project management, the second one is a CRM object. However they can be connected as explained in the next slide.
- In the *Activity Type – Setup* window define the different activity types you want to record. An *Activity Type* can be checked as chargeable. Then, *Time Sheet* records and *Activities* (CRM), that are connected to a chargeable *Activity Type*, will be included in the *Billing Document Generation Wizard* run.
- Note that you can define an *Activity Type* as absence. Then choose this activity type to record absence in the *Time Sheet*.
- In OEC Computers, Kate, the project manager, enters the *Activity Types Setup* window and adds a new activity type, named **Consulting**.
- She connects it to labor item **L10001 – hourly charge**. This is the item that will be invoiced in the A/R document that the wizard will generate.
- Then Kate marks the activity type as chargeable.
- When she adds records to the *Time Sheet*, she uses this *Activity Type* for recording consulting hours.

Activity as a Billable Object

From the CRM module:

Activity

Activity: Phone Call
 Type: General
 Subject: Steering
 Assigned To: User (Kate Milton)
 Assigned By: Jayson Butler
☐ Personal

Number: 22
 BP Code: C23900 Customer
 BP Name: Parameter Technology
 Contact Person: Daniel Brown
 Telephone No.: 0121 5896 0949

Financial Project: N51-C20000
 Project No.: 12
 Subproject No.: (12-1)
 Stage: (12-1)

Resource

Resource No.:
 Activity Type: consulting
 Cost Item: L10001

Activity Type - Setup

#	Activity Type	Labor Item	Chargeable	Absence
1	consulting	L10001	☒	☐
2	Sick leave		☐	☒
3	Back Office	LB0002	☒	☐
4			☒	☒

9

The same *Activity Type* is used in the *Activity* (CRM) that was added for a steering team meeting on the customer site.

This activity will be included in the *Billing Document Generation Wizard* since:

- The activity is connected to a project stage. In this example it is (12-1)
- A chargeable *Activity Type* is connected and
- The same financial project code is connected to the *Activity* and the project master data.

Billing Document Generation Wizard – Source and Target Information

From: *Project Management > Billing Document Generation*
Or via the context menu of the *Project Master Data*

Initial Wizard Configuration
Select the "Target document", "Customer" and other settings...

Target Information

Target Document: A/R Invoice
Target Doc. Type: Item
Target Doc. Series: Primary
Customer: C23900
Financial Project: NSI-C20000
Project No.: 1
Subproject No.:
Stage: (1-3)

Source Information

Source Types

☒ Include open AP Documents
☒ Include open AR Documents
☐ Sales Quotations (0)
☐ Sales Orders (0)
☐ Deliveries (0)

☒ Include Closed Work Orders
☒ Include Recorded Times
☒ Include Project Activities

Posting Date: From 01.11. To 30.11.
Delivery Date: | |

Step 1 of 3

10

The wizard collects open documents and billable items that are connected to a project and then generates an *A/R Invoice* or a *Delivery*.

In the target information choose the type of document to generate, the relevant project and the target stage to which the generated document will be connected. The chosen project is also the source project from which all source data is extracted.

In the *Source Types* section choose what to include in the run.

Note that the wizard not only generates A/R documents based on A/P invoices (expenses documented in the project), but also A/R documents based on *Sales Quotation/Orders* or *Deliveries that are connected to the project*.

For example, when a sales order is connected to one of the stages in the project, and you checked the *Include Open A/R Documents for Sales Orders*, then the wizard will generate a delivery or an A/R invoice based on this order.

Note that A/R document rows, in the *Project Master Data* should also be marked as *Chargeable* to be included in the wizard run.

In the *Source Types* you can also choose to include work orders, time sheet records and activities. All source types refer to objects that are connected to the project in subject.

When Kate runs the wizard, she highlights the target stage row in the project and then chooses the *Billing Document Generation Wizard* from the context menu. Then, when the wizard opens, the stage code is updated automatically in the *Stage* field.

Billing Document Generation Wizard – Confirm and Execute

Confirmed ☒	In step 2 confirm each relevant source
Finish	Choose Finish to open the document created by the wizard
Add	Add the automatically created A/R Invoice or Delivery

© 2020 SAP SE or an SAP affiliate company. All rights reserved. | INTERNAL

11

In step 2, the wizard displays the list of sources that are connected to the project. The system recommends only resources with the same financial project code. In the second stage you can still edit the activity type, quantity and delivery date. Then confirm the sources to include. To generate the document choose *Finish*. The target document opens automatically in *Add* mode. You can still make any change in the document and then add it. Once the document is added, it is connect to the target stage of the project. It is also already marked as chargeable and it is not editable anymore.

Note that the items involved in the automatically created document are driven from the source objects.

For marketing documents, the items are copied from the base documents. The same applies for work orders.

For time sheet and activity records, the items are taken from the activity type associated with these records.

Summary

Here are some key points:

- The *Billing Document Generation Wizard* generates an A/R invoice or a delivery per one project.
- The billable source objects in the project are: A/P invoices, work orders, time sheet records and activities.
- A/R sales quotations, orders and deliveries can also be included in the wizard run. In this case the system generates a delivery or an invoice based on these documents.
- Time sheet records are not recorded in the project master data. However, a connection to the project is done in the time sheet, in the *Stage* field.
- Each source object has to be marked as *Chargeable*. For marketing documents and work orders, it is marked in the rows of the project master data. For time sheet records and activities *Chargeable* is marked in the *Activity Type* that is connected to the object.

Here are some key points:
